# It's now or never ...

Unless global greenhouse gas emissions peak no later than three years from now and are cut nearly in half by 2030, the world will likely experience extreme climate impacts.

If urgent action is not taken, humanity will fail to limit warming to 1.5 degrees Celsius, the threshold for a future of more fires, drought, storms, and more.

At their presently rising levels, however, greenhouse gas emissions are likely to create twice as much warming: approximately 3.2°C by 2100.

For there to be any hope of limiting warming to 1.5°C, the use of coal must be slashed by 95 percent worldwide, while consumption of oil and gas has to be reduced by 60 percent and 45 percent, respectively, by 2050.

2022

2022

2019 lagen die CO<sub>2</sub>-Emissionen von Österreich um 1,9 Millionen Tonnen über dem EU-weit vereinbarten Zielen.

Die digitalen Zeiten in die wir gehen, werden sehr bald stärker von den Erfordernissen der Energiewende geprägt sein, als von neuen digitalen Devices und Services.

Viele der digitalen Zukunftstechnologien, AI, Blockchains, Metaverses, haben enorm hohen Strombedarf, was ihre weitere Entwicklung hemmen wird.

  - Wertschätzung von Authentizität, IRL-Experience, Körper und Gesundheit ...

# Meta's AR/VR segment made £2.2bn in 2021 despite record operating loss

Reality Labs' operating loss amounted to \$10.2 billion last year

Meta (formerly Facebook) has shared its financial results for the full year 2021, with its VR and AR segment making \$2.2 billion in revenue, compared to \$1.1 billion in 2020.

This includes "augmented and virtual reality related consumer hardware, software and content," which are now known under the name Reality Labs since the **rebrand in December**.

However, operating loss for the segment amounted to \$10.2 billion for 2021 -- an upward trend compared to a \$6.6 billion loss in 2020, and \$4.5 billion in 2019.

In the earnings call, a question was asked about this loss, to which CFO Dave Whener just replied that Meta does "expect Reality Labs operating loss to increase meaningfully in 2022, and that's incorporated into [its] outlook."

CEO Mark Zuckerberg touched upon Oculus Quest 2's sales, saying it's seeing "real traction" and that over \$1 billion has been spent on its store.

The hype of a so called Metaverse has been adopted by the advertisement industry with big excitement.

Just recently, the largest fast-food restaurant chain in the world with over 39,000 outlets in about 100 countries, **McDonald's** filed for trademarks to set up a metaverse restaurant.

McDonald's applied for a Metaverse Trademark in February 2022, despite the fact that it had not yet begun. McDonald's appears to be the latest company to capitalize on the metaverse's expanding popularity.

According to Insider, the golden arches fast-food chain has filed trademarks for a totally virtual metaverse restaurant that would serve your meal in real life.

McDonald's is planning a virtual and real-world eating experience that doesn't even require you to leave your game to order, according to trademark attorney Josh Gerben, who broke the story on Twitter.

Overall, McDonald's wants to have a foothold in the Metaverse before the AR/VR-based concept takes off. It would be one of the first corporations to provide its virtual products and services in the Metaverse, capturing a substantial market share.

## Sublimotion (Island of Ibiza Spain)

Sublimotion, which opened in 2014 on the Spanish island of Ibiza, is much more than the world's most expensive restaurant. It's weird, futuristic, and thought-provoking eating at its finest.

Sublimotion is a molecular restaurant located inside the Hard Rock Hotel Ibiza on Playa d'en Bossa, serving Spanish avant-garde food at its finest. A 20-course tasting menu with wine and champagne costs 1,500€ per person, but some feel it's a modest amount to pay for such a spectacular gastronomy-meets-virtual-reality experience.

## Tree by Naked (Tokyo, Japan)

Naked Tokyo's Tree debuted in July of 2017. Muramatsu, a Japanese visual artist known for his films and global installations, came up with the concept.

Diners will be required to wear virtual reality headsets for one dish. Diners may get the complete VR experience by wearing a VR headset that transports them to a farm where they are surrounded by farm animals dressed in elegant attire. While in space, diners can watch luminous fish float across their plate and wagyu beef being prepared right in front of their eyes.

*Pokémon Go* is a 2016 augmented reality (AR) mobile game developed and published by Niantic in collaboration with The Pokémon Company for iOS and Android devices. A part of the *Pokémon* franchise, the game is the result of a collaboration between Niantic, Nintendo and The Pokémon Company. It uses mobile devices with GPS to locate, capture, train, and battle virtual creatures, called Pokémon, which appear as if they are in the player's real-world location.

# Why the Biggest Bitcoin Mines Are in China

The heart of Bitcoin is now in Inner Mongolia, where dirty coal fuels sophisticated semiconductor engineering

Posted 4 Oct 2017 | 19:00 GMT

By **MORGEN E. PECK**

Bitmain acquired this mining facility in Inner Mongolia a couple years ago and has turned it into one of the most powerful money factories on the Bitcoin network. It quite literally metabolizes electricity into money. By my own

Photo: Stefen Chow

**Harsh Conditions:** Inner Mongolia has some of the cheapest electricity prices in the world (4 U.S. cents per kilowatt-hour, a government-reduced rate), which is the primary reason miners are setting up shop here. But it comes with a trade-off: The climate outside Bitmain’s warehouses can be brutal, especially in the summer.

# A US company has turned a former coal plant into a gas-fired Bitcoin mine

8 hours ago | Technology

Bitcoin mines require a lot of energy to power the computers inside. Greenidge Generation in New York has converted a former coal plant into a gas-fired Bitcoin mine.

Facing criticism from environmentalists, the company argues it offsets its mining in 100% renewable energy. The company claims to be the first in the world to do this.

# Bitcoin mining machines steamrolled by Malaysia police

20 Jul 2021 | Business

Police in the Malaysian state of Sarawak recently found themselves saddled with 1,069 Bitcoin mining machines - and found an innovative way to dispose of them.

The cryptocurrency mining rigs, worth an estimated \$1.25m (£920,000), had been seized in raids between February and April this year.

According to police, the machines were being powered with stolen electricity.

Bitcoin mining rigs carry out complex computations and in return are rewarded with the cryptocurrency - a process which consumes large amounts of energy.
